

Please delete page 6 of the specification submitted on 1 August 2001. Please add the following paragraphs starting at the top of the page.

Ar Document EP-A-0 589 619 discloses an architecture for a wireless telecommunication system in which voice channels and data links are provided separately between a multiplexer connected to a private branch exchange (PBX) and a cell site.

B2 SUMMARY OF THE INVENTION

Thus, the object underlying this invention resides in providing a communication system and method in which the drawbacks of the above prior art are removed.

This object is solved by a communication system as set out in the independent claim 1, and, alternatively, by a communication method as set out in the independent claim 23.

CLAIMS

Please delete claims 31-58 as filed on 1 August 2001. Please enter new claims 59-85 as follows. A clean copy of the new claims is included below.

59. (NEW) A communication system comprising

B3 a first communication device (1);

a first network control device (20; 21) for controlling a first network to which said first communication device (1) is connected; and
